Depot safety summary 2026

Fictional sample for pdfplumber.dev, printed as a tagged PDF.

1. Overview

Inspectors visited all six depots between March and June. Four passed on the first visit. Two needed a second inspection because fire exits were blocked.

Both have since passed. This section is set in two columns, so its reading order differs from a simple top-to-bottom, left-to-right scan of the page.

The structure tree records the intended order: the left column first, then the right one, regardless of where the lines sit on the page.

Tables and lists keep their structure as well, as the next two sections show.

2. Actions

- Clear fire exits at Riverside and Northgate.
- Replace extinguishers older than five years.
- Repeat the inspection in December.

3. Results by depot

Depot	Result	Score
Riverside	Second visit	71
Northgate	Second visit	68
Harbour	Pass	92
Elm Park	Pass	88

Released under CC0. Not real depots.
